CINEMA RENDERS

2023 Brochure

Whether you're after a media room for watching big screen movies with the family, inviting friends over to watch football, or binge watch your favourite Netflix shows, we can create a bespoke space that works for you (and your budget).

Art of Smart's in-house design team can work with you to create plans and drawings for all of the tech, AV, electrical & lighting your home could ever need. We even create renders in 2D and virtual reality to help you visualise some of our more bespoke solutions, and get the most out of the space for your cinema room.

These images show the 3D virtual reality render we used for our AOS HQ Cinema room.

Using a render like this allows to replicate it exactly - right down the individual components that will be installed in your system.
